

April 19th, 2016.

Good Afternoon, MCW Energy Group Shareholders and Friends:

We are pleased to announce that MCW Energy Group has joined **RB Milestone Group's ("RBMG") HiAlpha® Investor Network**, a proprietary, social network portal for progressive investors....created with the objective of outperforming traditional research and financial communications. Members may join at no cost and will have access to RBMG's proprietary research and revolutionary interactive tools that allow them to connect more efficiently with other key industry players. This platform allows investors to seamlessly follow and communicate with an elite group of industry experts that includes investment bankers and portfolio managers, as well as buy-side and sell-side analysts. HiAlpha's innovative functions offers investors the winning combination of access and knowledge, elements required for successful investing.

For a walk-through of this platform, please visit: <http://www.hialpha-rbmg.com/portal.html> MCW Energy Group's Page is now included in HiAlpha's portal platform in their Clean Tech category. Once you have registered with HiAlpha®, you will be able to view our news items, press releases, presentations and industry news which will be posted on this page.

Please visit: www.hialpha-rbmg.com/companies/view/159 Links to our website now include the "Technology" Section, the "Management" Section and the latest version of our MCW PowerPoint Presentation. We hope that you will find the **HiAlpha® Investor Network** a valuable tool and a reliable source of information and stock market research.

As previously mentioned, an updated version of our PowerPoint Presentation has also been posted to our website (www.mcwenergygroup.com/presentations). There are several new highlights which are included in this updated presentation:

- ◆ The near-completion of our scale-up of our existing Asphalt Ridge, Utah plant from 250 bbl/day to 500 bbl/day capacity and the completion of the winterization of the plant for year-round operation. MCW will continue funding efforts for an additional plant with a 2,500 bbl/day capacity.
- ◆ A focus on the development and implementation of a portfolio of environmentally-responsible oil sands/shale technologies. MCW is aggressively pursuing worldwide joint venture opportunities and royalty revenue streams from tech licensing applications.

- ◆ A recognition of the tremendous revenue stream opportunities in Remedial Extraction Projects on a worldwide basis. These major clean-up projects include the massive accumulation of tailings ponds in Alberta, man-made disasters of oil resources in the Middle East, and water contamination projects which are growing concerns in the oil/gas industry and other heavy industry sectors. MCW plans to create a portfolio of “Clean-Up Technologies” to address these global needs.

To this end, MCW’s first technology licensee has been appointed for the rights to our technologies in Canada and Trinidad & Tobago. TS Energy Ltd., a Canadian company, is currently holding discussions with several oil and gas companies in Alberta with a focus on cleaning up several tailings ponds deposits. There are over 176 square kilometers of these contaminated, hydrocarbon-filled formations....and growing. The Alberta Government is now putting added pressure on the clean-up of these deposits and new regulations concerning water-use limitations will soon be in place.

MCW believes that with the additional revenue streams (and substantial profit margins) generated from a portfolio of “clean-up” technologies for remediation projects, it will be much less reliant on narrow profit margins derived from currently low world oil prices. In the coming several weeks, our website will reflect the highlights of our focus for the coming months, with details on technology development, as well as progress on joint venture discussions.

If you have any questions regarding the discussion here, please feel free to contact me or any of the MCW Team. Thank you for your confidence in MCW Energy Group Limited!
